PHD POSITIONS · FALL 2027 CNRS · LAI · CENTURI

Join a new theory group in CENTURI, Marseille to study how active forces, chemical signals and growth shape cells and tissues.

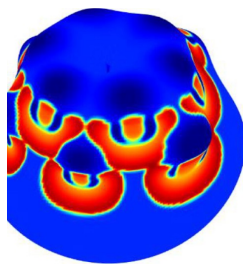

Biomechanics of developmental morphogenesis in active matter

RESEARCH

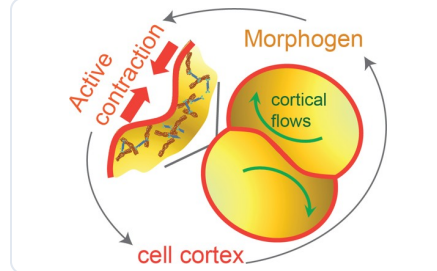

- 3D morphodynamics of active shell
- Chiral active matter theory
- Cell-ECM interactions in tissue morphodynamics
- Theory and simulation, in close collaboration with experimentalists

WE ARE LOOKING FOR

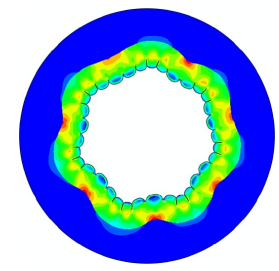

- A master's degree in mechanics, applied mathematics, applied physics or a related field
- Background in continuum mechanics, nonlinear dynamics or statistical physics
- Enthusiasm for analytical theory, numerics and living systems

Chiral waves on active shells

Cell cortex chemomechanics

Buckling of the gut

Brain folding

Dr. Sifan Yin

Active matter morph-YIN

CNRS Chargé de Recherche from February 2027
LAI, CENTURI · Luminy campus, Marseille, France

Send your CV, transcripts and a short statement of research interests to **syin@pks.mpg.de**
